

Steps to run the code:

1. For evaluation run the code in the file “Evaluation\_ChainOfThoughtPrompt.ipynb” in the google colab environment: (note that the file is at [https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/Evaluation\\_ChainOfThoughtPrompt.ipynb](https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/Evaluation_ChainOfThoughtPrompt.ipynb))

- a. Input the file

[https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/aapl\\_trading\\_sentiment\\_data\\_all\\_days\\_RefPaper%20\(1\).csv](https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/aapl_trading_sentiment_data_all_days_RefPaper%20(1).csv)

This file contains the trade and sentiment data. Note that the sentiment signals were generated using the simple prompt used in the reference paper. The sentiment signals were generated using the DeepSeek-V3.

- b. Input the file

[https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/chainofthought\\_aapl\\_trading\\_sentiment\\_data\\_all\\_days.csv](https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/chainofthought_aapl_trading_sentiment_data_all_days.csv)

This file contains the trade and sentiment data. Note that the sentiment signals were generated using the ‘chain of thought’ prompt. The sentiment signals were generated using the DeepSeek-V3.

2. Any of the following model files can be used to regenerate the RL trading agents:

- a. [https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/ppo\\_chainofthought\\_latest.zip](https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/ppo_chainofthought_latest.zip)
  - b. [https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/ppo\\_chainofthought\\_policy.pth](https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/ppo_chainofthought_policy.pth)
  - c. [https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/ppo\\_refpaper\\_latest.zip](https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/ppo_refpaper_latest.zip)
  - d. [https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/ppo\\_refpaper\\_policy.pth](https://github.com/SatishChandraPhD/EvaluationFinRL2025/blob/main/EvaluationCodeWithModels/ppo_refpaper_policy.pth)

## Evaluation Results:

Rachev Ratio ( $\alpha=0.05$ ) for FewShot Agent: 0.9316

Rachev Ratio ( $\alpha=0.05$ ) for RefPaper Agent: 0.9042

=== Performance Comparison ===

| Metric        | FewShot  | RefPaper |
|---------------|----------|----------|
| Total Return  | 0.078088 | 0.072370 |
| Annual Return | 0.120755 | 0.113106 |

|                   |          |          |
|-------------------|----------|----------|
| Annual Volatility | 0.120535 | 0.123613 |
| Sharpe Ratio      | 1.001830 | 0.915002 |
| Max Drawdown      | 0.098987 | 0.101649 |
| Win Rate          | 0.395210 | 0.395210 |

Information Ratio: 0.0561

CVaR (95%): -0.0186

Outperformance Frequency: 55.95%

#### Analysis of the evaluation results:

| Metric                   | Value   | Interpretation                         |
|--------------------------|---------|----------------------------------------|
| Information Ratio        | 0.0561  | Small but positive edge over benchmark |
| CVaR (95%)               | -0.0186 | Moderate losses on worst 5% days       |
| Outperformance Frequency | 55.95%  | Good — winning on most days            |
